

What are the main sources of energy in Burundi?

Ranked in order of importance, the main sources of energy consumed in Burundi are: biomass (wood), petroleum products, electricity from hydropower sources and peat. About 98% of the Burundian population, both urban and rural, use wood and charcoal as an energy source, mainly for heating and cooking.

What is the energy mix in Burundi?

The energy mix has remained virtually unchanged since 2010. New hydroelectric power stations at Jiji and Mulembwe with a total capacity of 48 MW are under construction. These new power plants will double Burundi's production capacity, which is currently 39 MW.

Is biomass a source of electricity in Burundi?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Burundi: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

How will new power plants affect Burundi?

New hydroelectric power stations at Jiji and Mulembwe with a total capacity of 48 MW are under construction. These new power plants will double Burundi's production capacity, which is currently 39 MW. They will also increase the national electrification rate from 5% to 8% and help to bridge the energy deficit.

Does Burundi have solar power?

Burundi's solar resources have a lot of potential. The average sunshine received annually is close to 2000 kWh/m<sup>2</sup>/year, which is similar to the southern Mediterranean regions in Europe. Initiatives in this direction are already under way.

Burundi Energy Corporation (BEC) is tackling these critical challenges head-on. Through our landmark initiatives--including large-scale solar power plants, solar streetlight installations, and community power hubs--we are committed to delivering clean, reliable, and affordable energy solutions across the country.

A hydropower station is providing a stable electricity supply to a hospital in Burundi, saving the facility at least \$2 million a month it would have spent on fuel and lubricants. As one of the least electrified countries in the ...

Capacity building of personnel in the energy sector; Diversification of energy sources; Upkeep and maintenance of energy equipment; Rational use of traditional energy sources (wood, charcoal); and ; Mitigation of climate change. The anticipated role that renewables and/or new technologies will play. Burundi faces an access to energy problem.
