What are ESS batteries?

ESS batteries are the foundation for a decarbonized grid. Iron flow technology allows for unlimited cycling with zero capacity degradation over a 25-year design life. That enables stacked revenue streams. Long-duration energy storage (LDES) is the linchpin of the energy transition, and ESS batteries are purpose-built to enable decarbonization.

Are ESS batteries eco-friendly?

Ours are the greenest, lowest lifecycle cost energy storage systems you can buy. ESS batteries are comprised of earth-abundant iron, salt and water, not hazardous chemicals or costly rare-earth metals, making them environmentally benign to produce and the easiest-to-permit storage technology in the world.

What are the most popular ESS batteries?

The following paragraphs compare the performance and commercialization of three of the most popular ESS batteries: lithium-ion batteries, Pb-acid batteries, and flow batteries to explain the dominance of lithium-ion batteries. Battery performance Table 1: Performance comparison of secondary batteries

Will ESS based on NCA/NCM battery achieve lower LCoS?

InfoLink expects ESS based on NCA/NCM battery to achieve lower LCoS than that based on LFP battery, provided that NCA/NCM battery make technological breakthroughs in the future. However, due to their different characteristics, the application of the two will only be more diverged in the future.
