How are turbines in Bermuda powered?

In Bermuda, turbines are powered directly by fuel oil or diesel. Fuel for electricity generation is then pumped through a 9 mile long pipeline to the BELCO power plant. In Bermuda, the turbines are completely dependent on imported fuel, which is brought to the island by tanker and fed into storage tanks at Ferry Reach in St George's Parish.

How many power stations are there in Bermuda?

In Bermuda, there is one power plant situated on a 23-acre site in Pembroke Parish, approximately 18.9 mile northwest of Hamilton. There are two power stations on the site.

What is Bermuda's Integrated Resource Plan?

On July 26, 2019, the RA released Bermuda's first Integrated Resource Plan, which outlined the framework for Bermuda's energy requirements over the next 25 years. The IRP aimed to have 85% of Bermuda's power generated by renewable means by 2035.

Bermuda Electric Light Company Limited (BELCO) is a Bermudian electricity-generating company. It is the country's sole supplier of electricity, operating a generating plant, transmission and distribution systems throughout the territory. BELCO is a subsidiary of Ascendant Group Limited (AG Holdings Limited), together with Bermuda Gas, PureENERGY Renewables, and inVenture Limited.

For over 115 years, the Bermuda Electric Light Company (BELCO) has worked continuously to supply a secure, reliable, and sustainable electric power system, laying the foundation for Bermuda's continual progress.
