What is Bess used for?

BESS is used in a variety of applications, including: Peak shaving reduces the peak electricity demand by using stored energy to meet part of the demand. This can help reduce the overall cost of electricity and the need for new power plants or upgrades to the existing grid.

Where did Bess come from?

Most of the bess is now generally believed to have been deposited by the wind. A curious deposit of an impalpably fine and unstratified silt, known by the German name bess, lies on the older drift sheets near the larger river courses of the upper Mississippi basin.

How are Bess systems used and commercialized?

Depending on their design and size, they can be used and commercialized in very different ways. In the energy industry, BESS are used for a variety of purposes such as balancing the supply and demand of energy in the grid, providing ancillary services, and enabling the integration of renewable energy sources.
