

Cuba verterra energy

What happened to Cuba's energy grid?

People gather in a plaza as Cuba is hit by an island-wide blackout, in Havana, Cuba, October 18, 2024. Cuba's energy grid has collapsed, leaving millions without power, the latest in a series of failures on an island struggling from creaking infrastructure, natural disasters and economic turmoil.

What can Verterra energy do for You?

These collaborations allow us to push the boundaries of what is possible and help us create a whole new industry in the waterpower space. Verterra Energy is developing a new waterpower technology called Voltornus, that is designed to harness the power flowing in rivers and oceans. We're on a mission to help achieve 100% renewable energy by 2050.

Why is the energy sector at a crossroads in Cuba?

Cuba's energy sector is at a crossroads. The country's mostly fossil fuel-fired energy system faces a number of longstanding and serious challenges, including breakdowns at aging power plants, decreasing fuel imports and fuel shortages, and the growing threat of climate change-related disruptions.

What is Verterra energy?

At Verterra Energy, we are committed to developing technologies that help the world achieve 100% sustainable energy in our lifetimes. With the world's first hybrid axis, the novel design harnesses the kinetic energy in both the speed and weight of flowing water. Modular, scalable arrays deploy on-site into rivers, canals and oceans.

How will Cuba's relationship with other countries impact the energy transition?

Cuba's relationships with other countries will be key to realizing the energy transition. Since 2000, Venezuela has been Cuba's primary source of imported oil. However, political and economic troubles in Venezuela caused oil exports to Cuba to fall by about half, resulting in Cuba increasingly seeking oil imports from Mexico and Russia.

What happened to Cuba's energy system in October?

For nearly a week in October, most of Cuba suffered near-total blackouts, the worst energy outages in decades. Cuba's energy and mines ministry said "conditions are more favorable now than in the last disconnection" and that the system was gradually being restored.

Verterra Energy is developing a new waterpower technology called Voltornus, that is designed to harness the power flowing in rivers and oceans. We're on a mission to help achieve 100% renewable energy by 2050. [Read More](#). [View Company Info ...](#)
