

What are microgrids and EU law?

Microgrids and EU law : Three Microgrid models to solve one regulatory puzzle. In: . 2023 ; Vol. 177. abstract = "Microgrids are decentralised electricity systems that can operate independently of the main electricity network, and which have the potential to contribute to the energy transition towards a more sustainable energy mix.

Can microgrids help DERs in the electricity market?

Microgrids, however, have the potential to facilitate the integration of DERs in the electricity market (Warneryd et al., 2020). A microgrid is a decentralised grid which can disconnect from the main electricity grid and structure into 'local sub-grids that manage their power and energy balancing' (Pinto et al., 2021).

Why do we need more microgrids?

More microgrids aimed to increase the penetration of microgeneration in electrical networks by exploiting and extending the microgrids concept. The project achieved a great deal thanks to the in-depth investigation of new micro source, storage and load controllers for providing efficient microgrid operations.

Do microgrids and EU law form a unique fingerprint?

Dive into the research topics of 'Microgrids and EU law: Three Microgrid models to solve one regulatory puzzle'. Together they form a unique fingerprint. Behrendt, J. (2023). Microgrids and EU law: Three Microgrid models to solve one regulatory puzzle.

What is the regulatory approach to microgrids?

In addition, the regulatory approach towards microgrids depends on EU Member States granting energy communities the right to manage part of the distribution network, which now depends on the discretion of the Member States.

What is a microgrid & how does it work?

Microgrids can be classified as Closed Distribution Systems or Energy Communities. Microgrids are decentralised electricity systems that can operate independently of the main electricity network, and which have the potential to contribute to the energy transition towards a more sustainable energy mix.

More microgrids aimed to increase the penetration of microgeneration in electrical networks by exploiting and extending the microgrids concept. The project achieved a great deal thanks to the in-depth investigation ...

Microgrids are decentralised electricity systems that can operate independently of the main electricity network, and which have the potential to contribute to the energy transition towards ...

Overview of Microgrid research and development activities in the EU Manuel Sánchez European

Commission Directorate General for Research manuel.sanchez-jimenez@ec ropa . ...

The first of these is the microgrid of the CE.D.E.R. in AC (lights, computers, machinery, laboratory processes, etc.), located upstream of the transformer substation, which is the largest load in terms of power. The ...

The MORE MICROGRIDS project aimed at the increase of penetration of microgeneration in electrical networks through the exploitation and extension of the microgrids concept, involving ...

Under different framework programs (FP5, FP6 and PF7) more than 80 microgrid projects are funded by the European Commission (EC) in different EU member states. In addition, Horizon ...

The aim of this article is to provide a research-based legal definition for microgrids, primarily for the EU, although it could also be adapted to other jurisdictions. The intended geography of adoption matters, given that ...

Link to publication in University of Groningen/UMCG research database Citation for published version (APA): Behrendt, J. (2023). Microgrids and EU law: Three Microgrid models to solve ...

The EU Microgrids Research Project At the EU international level, two major research efforts have been devoted exclusively to microgrids. Within the 5th Frame-work Programme (1998-2002), ...
