

# Energy storage battery unboxing tips

How can a home storage battery help you save money?

Alternatively, you could install a home storage battery. These store your electricity to use later, making your energy system more independent from the National Grid. Usually battery storage is used alongside solar panels, but it can also be used with an energy tariff that offers cheaper electricity at off-peak times.

What is battery storage & how does it work?

Battery storage allows you to keep electricity stored and ready so that you can use it when you need it. You can charge the batteries using excess electricity generated from solar panels or other home generation. Or you can charge them using your mains electricity supply.

What is a battery energy storage system (BESS)?

Battery Energy Storage Systems (BESS) are pivotal technologies for sustainable and efficient energy solutions.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.

How do I choose a solar battery storage system?

When choosing and installing a solar battery storage system, make sure your installer is signed up to the Renewable Energy Consumer code (RECC) or the Home Insulation and Energy Systems Contractor Scheme (HIES), as this means you'll be covered should you need to make a complaint or claim.

What can I do with excess electricity?

You can send excess electricity back to the National Grid, and use mains electricity in the evenings and at night. Alternatively, you could install a home storage battery. These store your electricity to use later, making your energy system more independent from the National Grid.

What is solar panel battery storage? Battery storage allows you to keep electricity stored and ready so that you can use it when you need it. You can charge the batteries using excess electricity generated from solar panels
