Storage: 5 kWh. Size the production RCD to the production circuit size or higher. System size: PV: 7.36 kW AC. Storage: 20 kWh.

Can energy storage equipment operate in parallel with the grid?

In Section 3.1.1 of the Xcel Energy Guidelines for Interconnection of Electric Energy Storage with the Electric Power Distribution System document (Energy Storage Guidelines document), EConfiguration 1A, the energy storage equipment is not capable of operating in parallel with the grid.

What is included in a system diagram?

Diagrams are included are illustrative of example system configurations and installations. They should be used for reference only. The information provided is only generic and shall be adapted to project specific requirements and installed according to state and local codes. Simple Installation with no backup loads served.

What is a grid connected system?

Page 6 TERMINOLOGY 7. Grid-connected Systems Grid-connected systems usually consist of photovoltaic arrays, H30 indoor units, battery system, and the grid. When the electric energy generated by the PV string is sufficient, the surplus electric energy can be fed into the grid.

How does energy storage work?

Energy storage operates in parallel with the grid. Generation, if present is non-renewable. Metering is standard (non-net-metered). Energy storage and generation, if present, are not allowed to export energy to the grid. The method of achieving #4 must be fully illustrated in the online diagram or described below.
