Could a £4bn offshore wind farm meet Isle of Man's peak energy demands?

Power generated from a £4bn offshore wind farm could meet the Isle of Man's peak energy demands, the company behind the plans has said. Renewable energy firm Orsted is seeking views on the proposals for the project in area off the island's east coast.

How much electricity does the Isle of Man need?

While average electricity demand on the Isle of Man stands at 40MW, it can peak at 75MW during the winter and drop at night during summer to 25MW. MU chairman Tim Johnston said "detailed work" to determine the best approach to increase renewable energy was underway.

Will Three60 energy provide energy independence to the Isle of Man?

THREE60 Energy has secured an extensive contract with Crogga Limited to drill an appraisal well in the Crogga gas field offshore Isle of Man. If the well proves successful, it has the potential to provide energy independence to the Isle of Man by 2026.

How will the Isle of Man generate electricity?

Plans to generate about 75% of the Isle of Man's electricity through solar and on-shore wind projects have been backed by the Council of Ministers. Manx Utilities (MU) will look to install solar panels on public car parks and government buildings. Wind turbines could also be built on public land to create 30MW of electricity by 2026.

Can the Isle of Man get energy independence by 2026?

If the well proves successful, it has the potential to provide energy independence to the Isle of Man by 2026. The appraisal well, called Independence, will be used to establish commercial flow rates of gas from the conventional Permian Collyhurst Sandstone reservoir.

Can the Isle of Man provide stabilising power to GB or ROI?

Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export. These options have not been explored in the analysis.
