

Will Belgium's energy mix be reliant on imports in 2035-2050?

Belgium's existing generation facilities and already-approved investments can provide only half of what is needed in the long term. Therefore, new governments will soon have to consider the desired energy mix for the period 2035-2050 and how reliant the country is willing to be on imports.

Will Belgium become more reliant on electricity imports?

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.

How will Belgium's energy landscape change over the next 25 years?

BRUSSELS | The Belgian energy landscape will undergo an immense transformation over the next 25 years, but the outlook is nevertheless positive. By 2050, energy consumption from buildings, transport, and industry will fall by around 40%. These efficiency gains will be mainly driven by increasing electrification.

Who is responsible for energy policy in Belgium?

Three federal regions share the energy policy responsibility in Belgium. They include Brussels (the capital), Flanders and Wallonia. The regions are responsible for acquiring and distributing all kinds of energy (renewable and non-renewable). Currently, renewable energy is mainly used in the heat sector in Belgium.

Is the Belgian energy plan reliant on imports?

Since the Belgian energy demand exceeds the potential of local renewable energy production (about 132 TWh), the current plan towards net zero is heavily reliant on energy imports, weighing on security of supply and increasing the risks of industrial delocalization.

What energy challenges does Belgium face?

The energy challenges that Belgium faces are significant and increasing. It is clear that developing countries, just like Belgium, will have to face the challenges that come with the policies expected of developing or developed countries. However, the growth of renewable energy in Belgium can only grow when aided by certain policies.

G& V Energy Group | 2,044 followers on LinkedIn. Green is our way to go. | G& V is a fast-growing Belgian company with a strong focus on sustainability and is active on the Belgian petrol-market. Thanks to the strategic acquisitions of the Esso locations in the region of Brussels-hainaut and Flanders, the firm has grown to the biggest independent player on the Belgian ...

At BREG - Belgian Renewable Energy Group - we're eager to make our own contribution. Using our robust experience in the renewable energy sector and our strategic partnerships, we specialize in developing

The transition from an energy supply based on fossil fuels to more renewable energy sources has a huge impact. To achieve our climate goal, we are triggered by the debate about the optimal use of renewable energy sources at the lowest "Total Cost of Ownership", taking into account the spatial preconditions.

BREG | 1,182 followers on LinkedIn. Creating added value through renewables | BREG is a global developer, builder and operator of wind and photovoltaic (PV) solar energy solutions ranging in size from community installations to utility-scale projects. It is headquartered in Belgium with offices in the United States of America.

Energy One Belgium | 1,060 followers on LinkedIn. Energy One Belgium (previously EGSSIS NV) provides SaaS solutions and 24/7 operations services for gas & power markets. | EGSSIS, part of Energy One Limited (ASX: EOL), is a Belgian service provider in the gas and power markets. Since 2008 we offer reliable gas and power SaaS solutions and 24/7 dispatching ...

At the end of 2019, Belgium submitted to the European Commission the final version of the National Energy and Climate Plan for 2021-2030. Besides energy and climate, mobility, science policy, finance, defence, agriculture, both at ...

Energy Solutions Group is the largest independent green power producer (IPP) in the Benelux area. ESG currently owns and exploits an operational portfolio of 666 MW representing a total investment of more than EUR ~1,2 bln. With this portfolio ESG is currently able to supply green power to 250,000 households and save 400,000 tons of CO<sub>2</sub> annually.

Energent, founded in 2013, is an energy cooperative driven by a strong dedication to renewable energy and community involvement. The organisation operates with a team of 13 employees, complemented by the contributions of 9 volunteers, and further supported by a membership of 2148 individuals. ... Belgium promotes energy efficiency. There are ...

Other energy related priorities for Belgium are: advancing sustainable energy infrastructure; delivering offshore energy to all; facilitating international hydrogen trade; boosting the renovation wave; driving Europe's radioisotope excellence; We aim to keep up the momentum of the energy transition through our combined presidencies: EU ...

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.
