

What is the government electrification strategy in the Gambia?

The government electrification strategy has embraced both grid-based and off-grid options. The Gambia has abundant renewable energy resources that could help meet growing demand. The Gambia has abundant solar energy resources across the country, a good biomass resource in most areas, and a modest wind regime along the coast.

Will re be a part of the Gambia's energy future?

The Gambia has already started this process by setting up a strong policy that includes Re as part of its energy future. It is in the process of building the institutional and legal framework that will help to deliver this promise.

Why is energy important in the Gambia?

The availability of adequate, reliable, affordable and sustainable energy is a critical milestone in the socio-economic development of any country. While less than half of all households in The Gambia have access to electricity, over 90% are still dependent on solid biomass for cooking and heating. This has intensified poverty.

Should Gambia invest in the energy sector?

Future investment only occurs if there is sufficient confidence that investors today are gaining good returns. The Gambia has an attractive investment environment in tourism and other development sectors. It needs to broaden this to the energy sector. That means building its own capacity to implement its policies to promote and support Re.

What type of energy system does the Gambia have?

The Gambia has a dual energy system containing co-existing traditional and modernised energy systems and practices. On the one hand, traditional biomass fuels and inefficient technologies dominate household energy needs. On the other, a modernised energy system uses electricity and more refined fuels as well as modern appliances.

Is re a solution to energy problems in the Gambia?

Policy makers across Africa have been among the last to embrace Re as a solution to their energy problems. They are often locked into crisis management on a day-to-day basis. The country's policy makers need to be persuaded that Re has a real future in the energy mix of The Gambia. They need to demonstrate this by their actions.

Background Female genital cutting (FGC) involves an acute physical trauma that holds a potential risk for immediate and long-term complications and mental health problems. The aim of this study was to examine the prediction of depressive symptoms and psychological distress by the immediate and current physical

complications following FGC. Further, to ...

In 2015, the Government of the Republic of The Gambia passed the Women's (Amendment) Act 2015, which prohibits female circumcision.
