

Finland expand energy company

What are Finnish energy companies doing now?

Finnish energy companies have reported advances with sustainable diesel, ethanol, hydrogen and methane. The European clean energy transition has been kicked into overdrive following the Russian invasion of Ukraine. The European Commission on 8 March unveiled a draft plan to break dependence on Russian fossil energy by 2030.

How does Finland deal with rising energy prices?

To mitigate the impact of increasing energy prices, Finland has implemented measures such as reducing retail electricity prices, limiting profits for distribution system operators, exploring energy transition investment programs, and preparing a loan guarantee program to support energy efficiency and renewable heating systems (Fortum 2022).

Which companies are supporting the Green Energy Plan in Finland?

Companies in Finland have launched undertakings that support many of the plan's goals - some years ago, others more recently. P2X Solutions, Lahti Energia and Nordic Ren-Gas, for example, announced major investments in green hydrogen and methane production in the first quarter of the year.

How does Finland generate electricity?

We generate energy with reliable and adjustable hydroelectric, thermal and nuclear power. We have 18 power plants in which we generate over 20 per cent of all the electricity produced in Finland, as well as process steam for industries and district heat for communities.

Why does Finland have a high energy demand?

Finland has one of the highest per capita energy demands in the world due to the cold climate, well-developed economy and a robust industrial sector. Finland has made impressive strides in reducing its reliance on fossil fuels by leveraging nuclear power and expanding renewable energy production.

Will Finland have a hydrogen economy in 2023?

As mentioned, the hydrogen strategy published in June 2023 points the way towards a hydrogen economy in Finland. The last 5 years have made energy security a big theme in the national energy debate, mostly due to the Russian invasion of Ukraine but also some natural development in the energy sector.
