

How many photovoltaic panels can be installed on a flat roof

Can you put solar panels on a flat roof?

One downside of putting solar panels on a flat roof is that they take up more space per kW. When considering what type of roof is ideal for solar panels, many often consider pitched roofs as the only option. Homeowners also often ask "Can you have solar panels on a flat roof?".

How much do flat roof solar panels cost?

Flat roof solar panels can cost between £2,800 - £12,100 for the average 2 to 3 bedroom house. Flat roof solar panels cost less in terms of labour costs since installation is easier (however this depends on your roof). One downside of putting solar panels on a flat roof is that they take up more space per kW.

How much does a solar panel weigh on a flat roof?

As mentioned earlier, solar panels on a flat roof need a heavy ballasted mounting system to stay secure in high winds. And that ballast can make a solar panel up to five times heavier than a typical non-ballasted panel. A ballasted solar panel can weigh around 100kg, whereas a non-ballasted solar panel is only about 20kg.

How far apart should solar panels be on a flat roof?

However, as a general rule of thumb, you need about one metre between each row of solar panels on a flat roof. Building and safety regulations also require a minimum distance of 0.5-1m between the solar panels and the edge of the roof. Where is the best place to put solar panels on a roof?

What angle should solar panels be installed on a flat roof?

The ideal pitch for a Solar Panel is around 30 degrees off the horizontal. Simply because this allows the panels to gain more exposure from the sun throughout the entire day. When installing Solar panels on a flat roof, this is easily achieved. As the Solar Panels are installed onto a bracket which tilts the panel to around 30 degrees.
