How do you install solar panels on a roof?

**Rail and Panel Installation** The cheapest and most practical way to install solar panels is with a combination of rails and brackets. A secure hook is fastened to the rafters underneath your roof tiles and the rails are attached to these exposed hooks across the length of the solar array.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Can I install extra solar panels on my roof?

It's worth remembering that installing extra panels isn't just dependent upon how much roof space you have, but how much weight the roof can support as well. Panels generally weigh between 15kg and 30kg, so older roofs, in particular, should be checked to make sure they can support your solar setup.

How do I prepare for a solar panel installation?

Installing solar panels helps homeowners save money and invest in cleaner energy. To prepare for an installation, determine your energy needs and home compatibility with a solar panel system. The installation requires complicated electrical work and paperwork that any reliable solar installer can handle.

Can I add more solar panels to my roof?

Obviously, this is dependent upon how much space you have to situate the panels, but solar systems are usually fairly flexible setups and can be added to bit by bit if need be. It's worth remembering that installing extra panels isn't just dependent upon how much roof space you have, but how much weight the roof can support as well.

Can solar panels be installed on a south-facing roof?

For homes in the Northern Hemisphere, a shade-free, south-facing roof with solar panels placed at a 30-degree tilt is ideal for production. This is not to say that having a roof that is partially shaded, or east- or west-facing, puts a solar PV system out of the question.
