

# Isle of Man energy system resilience

What's new in the Isle of MAN Energy Strategy?

The document details progress made over the past 12 months, with key areas including: Clare Barber MHK, Minister for Environment, Food and Agriculture, said: 'The updated Energy Strategy reaffirms our commitment to building a sustainable, secure, and affordable energy future for people in the Isle of Man.'

How will the electricity sector change in the Isle of Man?

As the uptake for electric heating and electric vehicles increases, the electricity sector will have to grow to meet future demand. The majority of the Isle of Man's electricity is currently sourced from fossil fuels.

Will the Isle of Man reduce emissions by 2050?

**SUMMARY OF KEY FINDINGS** In response to the global climate emergency, the Isle of Man Government has legislated to reduce its emissions to net zero by 2050. This target has implications for both electricity demand and generation mix.

Does the Isle of Man have N-2 grid operability resilience?

Therefore the IoM has N-2 grid operability resilience. Publicly available information suggests that the Isle of Man has higher resilience requirements compared to other similar island jurisdictions. \*New Power Plant North Mole Gibraltar: Example of CO2 footprint improvement with Gas and Dual Fuel engines. Hans J&#246;rg Lauer.

Can electricity be decarbonised on the Isle of Man?

Electricity generation is responsible for approximately 33% of all greenhouse gas emissions on the Isle of Man, and a majority of this is currently sourced from fossil fuels (natural gas). Without the decarbonisation of electricity, it will not be possible to reduce carbon emissions significantly in other areas such as heating and transport.

How are emissions affecting the Isle of Man?

Consequently, emissions in this sector are increasing as other sectors decarbonise and electrify. Electricity generation (including emissions from both the Manx Utilities and the Energy from Waste plant) is currently the dominant source of carbon emissions on the Isle of Man, accounting for 33% of the island's emissions at 245KT per year.

This work aims to improve the basis of complex considerations needed for resilience improvement measures. The specific objectives are to: (1) clarify the meaning of energy system resilience, (2) map out a broad landscape of threats to energy systems from a resilience perspective, (3) map out a more detailed landscape of threats and countermeasures for a ...
