What is Microgrid Certification Training?

Microgrid Certification Training is a 3-day course designed for all engineers who want to learn, design, or operate microgrids. It is also suitable for power traders to understand modern microgrid technologies and independent system operator personnel. The training covers understanding energy management systems (EMS) in microgrids, including centralized or decentralized microgrids.

What is a microgrid energy system?

A microgrid is a self-sufficient energy system that serves a discrete geographic footprint, such as a college campus, hospital complex, business center or neighborhood. Within microgrids are one or more kinds of distributed energy (solar panels, wind turbines, combined heat & power, generators) that produce its power.

What is a microgrid and how does it work?

A microgrid consists of one or more kinds of distributed energy sources such as solar panels, wind turbines, combined heat & power generators, that produce its power. In addition, some microgrids contain energy storage, typically from batteries, and some now have electric vehicle charging stations.

What is an isolated microgrid?

An isolated microgrid is a power grid that operates independently from the main power grid. It is deployed in areas that are remote from a wider power grid and need to ensure continuous and reliable energy supply without sufficient renewable sources. The choice of power sources often depends on the costs of fuel for such installations.

What is a residential microgrid?

One appealing residential microgrid application combines market-available grid-connected rooftop PV systems, electrical vehicle (EV) slow/medium chargers, and home or neighborhood energy storage system (ESS). During the day, the local ESS will be charged by the PV and during the night it will be discharged to the EV.

Do microgrids qualify as utilities?

If a state utility regulatory agency decides that services provided by microgrids qualify them as utilities, that body can regulate the rates charged for electricity and decide whether to approve facility construction, among other powers, all of which have major implications for microgrid developers and owners.
