

Who can benefit from the development of energy communities in Bulgaria?

Households, small businesses, farmers, municipalities could all potentially benefit from the development of energy communities in Bulgaria, but the interviews conducted as part of this analysis indicate that it will take time, sustained support, and a clear policy framework to drive change.

What does Bulgaria's energy policy look like?

KEY BARRIERS AND RECOMMENDATIONS The overall trajectory of energy policy in Bulgaria continues to rely heavily on high-cost, large-scale technologies and projects, including expanding the role of natural gas, and doubling down on nuclear power.

What is the main source of electricity in Bulgaria in 2022?

Coal energy was the main source of electricity production in Bulgaria in 2022. It accounted for over 45 percent of total electricity generation. Nuclear energy ranked second, making up 35 percent of total production.

What is the main energy source in Bulgaria?

The main local energy source in Bulgaria is lignite coal. Another local energy source is nuclear energy, which significantly contributes to energy independence. In 2022, the share of nuclear energy production is 32.6% of total electricity production in Bulgaria. The share is expected to remain above 40% until 2030.

What is Bulgaria's energy strategy?

Despite being a net electricity exporter, with major buyers like Romania, Greece, and North Macedonia, Bulgaria's energy strategy remains fossil-fuel dependent. The 2019 National Energy and Climate Plan indicated a long-term reliance on coal and nuclear, with no immediate phase-out in sight. 4. Future prospects

Are energy communities legal in Bulgaria?

There is currently a lack of a clear legal definition and specific legal provisions regarding energy communities both at national and municipal levels in Bulgaria. This lack of regulation and systematic approach discourages potential investors to take the risk to develop an energy community.

Although gas prices in Bulgaria are in fact some of the lowest in the EU, inefficient systems in old, multi-storey modular buildings from the Soviet era lead to significant losses in the energy grid. The removal of ...
