

So, Moldova cannot integrate into the energy system more wind energy than the minimum consumption at night and more solar energy than the maximum consumption during the day. If we produce more green energy than it can consume, it will flow into the Romanian or Ukrainian grid either for free, or Moldova will have to pay to balance the system.

Coal and renewable energy sources, such as hydropower, wind, and solar, contribute only marginally to Moldova's energy mix. The country produces just 20 per cent of the primary energy it consumes, mostly from solid biomass, meaning most other primary energy sources are imported. Some of these primary sources are converted into fuels or ...
