

How will Myanmar benefit from China-Myanmar energy cooperation?

It is promising that Myanmar would benefit with more exports, higher economic growth and more energy consumptions. It is well-acknowledged that the international relations and economical interdependency will promote the scale of energy trade [92 ], bringing about more opportunities in China-Myanmar energy cooperation.

What is Myanmar's energy policy?

Myanmar's energy policy is generally aimed at ensuring energy independence by increasing national production of available primary energy resources through intensive exploration and development activities.

What is Myanmar's indigenous energy production?

In addition to crude oil, Myanmar indigenous production also includes coal, gas, hydro, biomass, and other renewables (solar and wind). Compared with energy imports, Myanmar's total indigenous energy production grew more slowly at an average rate of 5.1% per year.

Is Myanmar realigning to a new energy mix?

At the Myanmar Oil and Gas Society annual meeting on 24 January 2021, minister U Win Khaing mentioned that the country is realigning to new energy mix to hydropower 40%, solar 14%, domestic gas 34% and LNG 11%.

Is Myanmar an electricity importing country?

Myanmar was not an electricity-importing country and it has been exporting electricity to China since 2013. Table 4.9 shows the electricity supply of Myanmar in 2000 to 2016. Table 4.9. Electricity Supply (GWh) AAGR = average annual growth rate, GWh = gigawatt-hour.

How does Myanmar produce electricity?

The share of biomass used for charcoal production declined from 2.0% in 2000 to 1.8% in 2016. Myanmar's sources for power generation were mainly natural gas and hydro resources. In 2000, total electricity production was 5,118 gigawatt-hours (GWh) and 62% of this total was generated from natural gas power plants.

Myanmar's total final energy consumption (TFEC) (by industry, transport, commercial buildings, and

residences) will increase by 3.0% per year by 2040. Oil will increase by 4.9% per year and electricity by 7.0% by 2040. Total primary energy supply (TPES) will increase by 3.5% per year by 2040. The main imported fuel is oil, but by 2040 all ...

Myanmar had a total primary energy supply (TPES) of 16.57 Mtoe in 2013. Electricity consumption was 8.71 TWh. 65% of the primary energy supply consists of biomass energy, used almost exclusively (97%) in the residential sector. Myanmar's energy consumption per capita is one of the lowest in Southeast Asia due to the low electrification rate and a widespread poverty. An estimated 65% of the population is not connected to the national grid. Energy consumption is gr...

Oferecemos diversos cursos e treinamentos práticos em nosso moderno Centro de Treinamento BelEnergy.
