

What energy system does Namibia have?

Namibia currently has a small energy system that is dominated by its 347 megawatts (MW) Ruacana hydropower plant. The country is also considering an additional hydro-power plant, the Baynes Hydro-power Project on the Kunene River.

Who is cleanenergy solutions Namibia?

This collaboration between two solid family-owned companies stems from a shared vision to deliver a remarkable and impactful project in Namibia. Cleanergy Solutions Namibia is leading the development of a green hydrogen production plant in Namibia's Erongo region.

What is Namibia's energy future?

Some of the report's key findings include, solar and wind with storage make up the largest share of Namibia's energy future under a least-cost energy investment scenario to 2030 and 2040, cumulatively accounting for 70% and 77% of the country's installed capacity, respectively.

Is Namibia a good place to invest in solar and wind energy?

Namibia has widespread high-quality solar and wind resources in areas that avoid dense populations, protected areas, and sensitive land uses. Nearly 125,000 km² of the most suitable solar and wind areas also pose a relatively low social risk.

Will Namibia increase energy supply?

Namibia is at a crucial point in its energy system development and must make difficult decisions over the coming years to increase energy supply as demand could double in the next 20 years, while also managing costs and negative impacts.

What factors affect Namibia's energy system?

The analysis covers both techno-economic factors, providing multiple assessments that consider costs, social and environmental impact, and risk, as well as forward-looking climate factors for different energy technologies. Namibia currently has a small energy system that is dominated by its 347 megawatts (MW) Ruacana hydropower plant.

Namibia: Energy intensity: how much energy does it use per unit of GDP? [Click to open interactive version.](#) Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
