

The diffusion coefficient of zincate ions through Celgard® 3501 and Celgard® 5550 was reported to be  $3.2 \times 10^{-11}$  [85] and  $1.1 \times 10^{-5} \text{ m}^2 \text{ s}^{-1}$  [83], respectively. This is a very large difference in the zincate ions diffusion coefficient value despite the fact that both membranes have exactly the same porosity (55%) and pore size (64 nm ...

Zinc has the potential for widespread use as an environmentally friendly and cost-effective anode material pending the resolution of rechargeability issues caused by active material loss and ...

25&#181;m Battery pp Separator Celgard 3501 For Lithium Battery The separator material is non-conductive, and its physical and chemical properties have a great impact on the performance of the battery. Item NO.:

Celgard 2320/2400/2500/3501 Celgard 3501\_60mmx20m

celgard 3501

a) Preparation of NC-Celgard by submersion of Celgard 3501 in 5.0% Nafion solution for 20 h and air drying at RT. SEM images of b) Celgard 3501 as received and c) NC-Celgard. d) FTIR spectrum for unmodified Celgard 3501 and NC-Celgard with peaks at 1150 and 1204  $\text{cm}^{-1}$  indicating C-F bond stretching.

Celgard 3501 shows extra peaks for silicon and oxygen, which indicate some of the components of the surfactant used for the coating. The PVDF-coated Celgard 2500 separator shows high-intensity F and reduced C, which is consistent with the ratio of C/F in PVDF. After cycling, the XPS spectra of all the separators, except for the Celgard K1640 PE ...

On the other hand, for Nafion 212 and Celgard 3501 cells, after the first cycle, we noted rapid capacity fade for both: Nafion 212 retained only 43% of its initial capacity after 34 cycles over 5.7 days (~1.8% loss per cycle) with Coulombic efficiencies steady at ~95%, and Celgard 3501 retained only 46% over 13 cycles over 1.6 days (~3.9% ...
