

Is North Macedonia a state-owned power company?

North Macedonia's state-owned power company was unbundled and partially privatized in the early 2000s. Austrian utility company EVN has been responsible for electricity distribution in North Macedonia since entering the market in 2006.

What type of electricity does North Macedonia use?

North Macedonia relies predominantly on fossil fuels (low-grade lignite and gas) and hydropower, and is dependent on electricity imports. The total generation of electricity in 2022 was 5,634 GWh, and another 1,471 GWh was imported to satisfy the total domestic electricity demand.

How many power plants are there in North Macedonia?

The electric power production system in North Macedonia consists of two coal power plants with a total installed capacity of 825 megawatts (MW), several hydro power plants with a total installed capacity of 695 MW, one combined generation power plant, a heavy oil plant, a few solar power plants, a few biogas plants, and one wind power farm.

Did North Macedonia change its energy regulations?

There were no major energy legislative changes, but North Macedonia continued to harmonize its energy regulations with the EU Energy Community's Third Energy Package (TEP). North Macedonia's state-owned power company was unbundled and partially privatized in the early 2000s.

Did North Macedonia import crude oil?

North Macedonia did not import crude oil. Oil accounts for the second largest share of CO<sub>2</sub> emissions globally, primarily in the transport sector where, despite recent exponential growth in EV sales, the vast majority of cars, trucks, ships and aircraft are still powered by oil-based fuels burned in internal combustion engines.

How much oil is produced in North Macedonia in 2021?

No data for North Macedonia for 2021. Almost all of the crude oil produced in the world is refined into other products before being used. These include fuels for automobiles, ships and aircraft, as well as those used for heating.
