Does proficad support photovoltaic circuit diagrams?

ProfiCAD supports the drawing of photovoltaic circuit diagrams. In addition to the common electrical engineering symbols, the library includes symbols such as solar cells, photovoltaic panels, solar collectors, inverters, etc. Should you need more symbols, you can create them in the symbol editor. Some sample drawings (click for full size):

How does a photovoltaic system work?

The current and voltage are measured using a 16-bit analog-to-digital converter power module, the INA226, which will allow us to track the power outputted from the photovoltaic panel. A potentiometer acting as a rheostat will serve as the varying load on the system, which will be used to identify the peak power points of the system.

How does a PV array work?

A general description of the entire system and the functionality of each module are given to explain how the system works and what parameters can be controlled by the system. The PV array is connected to a DC-DC converter (boost converter). The output power of the PV array is a function of the inputs namely irradiation and temperature.

What is a PV array model?

Unfortunately, PV array models are complex and involve many co-dependent components, all of which impact the behavior, and thus the output, of the solar panel. The simplest model for a PV cell can be written as the relationship between voltage and current, as follows: where is the current and is the voltage generated through the PV cell.

How to measure solar power output from a solar panel?

An Arduino board will be used to log the current and voltage values outputted from a small solar panel. The current and voltage are measured using a 16-bit analog-to-digital converter power module, the INA226, which will allow us to track the power outputted from the photovoltaic panel.

When can new PV modules be added?

New PV modules can be added at any time. Photovoltaic (photo = light; voltaic = produces voltage) or PV systems convert light directly into electricity using semi-conductor technology. (@10% efficiency) Thermal systems (hot water, pool heaters) produce heat from the sun's radiation (@+40 % efficiency) Large difference in value of energy types.
