

Can solar clinker be used for cement production?

For the first time ever, CEMEX and Synhelion successfully connected the clinker production process with the Synhelion solar receiver, producing solar clinker. This revolutionary innovation is an initial step to develop fully solar-driven cement plants.

Can solar energy be used in cement production?

Recently the use of solar energy in cement production has drawn significant research and scientific interest. Licht et al. (2012) developed a method for cement production, which results into near zero CO₂ emissions.

How clinker can be produced from concentrated solar radiation?

The Synhelion and CEMEX R&D teams set up a pilot batch production unit to produce clinker from concentrated solar radiation by connecting the clinker production process with the Synhelion solar receiver. The pilot was installed at the Very High Concentration Solar Tower of IMDEA Energy, located in Spain.

What is a novel Cement production process?

The conceptual design of a novel cement production process has been developed during the SolCement research project. Fossil fuels used for limestone calcination are replaced by concentrated solar energy. Also, a Thermochemical energy Storage Reactor - TSR is used for transferring energy between daytime and nighttime operation.

Should cement plants be solarized?

Typically, more polluting solid fuel sources, such as petcoke, are used in several cement plants. However, NG was selected as the cleanest possible choice among fossil fuels (Fadayini et al., 2021) to compare the potential of solarizing cement plants with the "best case" scenario.

When will solar clinker production start?

Synhelion and Cemex introduced the first solar clinker production in a small-scale pilot process in early 2022. "From the pilot installation, we foresee completing our first small-scale industrial plant in Móstoles by 2026," a company spokesperson told pv magazine.

Switzerland-based Synhelion and Mexican construction materials supplier Cemex have started building a high-concentration solar tower designed to produce synthetic fuels for a cement production...

The project will support the decarbonization of energy-intensive cement clinker production. ... "Cement produced with solar energy is an exciting technology with tremendous potential to reduce ...

In the present work, the authors have attempted to design a solar cement plant for supplying solar energy to the cement industry. A case study was done, which investigated ...

Synhelion and Cemex announced today a significant milestone in their joint effort to develop fully solar-driven cement production: the scaling of their technology to industrially-viable levels. This includes the continuous ...

Forecasting models for photovoltaic energy production are important tools for managing energy flows. The aim of this study was to accurately predict the energy production ...

It is anticipated to cover approximately 10% of Vassiliko Cement Works needs in electricity. The photovoltaic park contributes to the Cyprus national targets attainment for 2020 and to the mitigation of carbon dioxide ...

Today global industrial companies are taking a more sustainable approach to cement production to stamp out the use of fossil fuel energy. Holcim US, the North American division of Swiss-French industrial ...

CEMEX, S.A.B. de C.V. ("CEMEX") and Synhelion announced today the successful production of the world's first solar clinker, the key component of cement, a significant step towards developing fully solar-driven ...

As one of the leading solar mounting system photovoltaic support bracket manufacturers, suppliers and distributors in China, we warmly welcome you to buy bulk solar mounting system photovoltaic support bracket from our factory. ...

The Solar energy production is growing quickly for the global demand of renewable one, decrease the dependence on fossil fuels. However, disposing of used photovoltaic (PV) panels will be a ...

This article deals with the use of photovoltaic panels at the end of their life cycle in cement composites. Attention is focused on the properties of cement composite after 100% ...

The cement industry consumes around ten percent of the total energy utilized in the industrial sector on an annual basis. According to the Cement Manufacturers' Association, contemporary cement factories require ...

This Special Issue presents original research results in the following areas: the use of solar panels after the end of their life cycles in the production of cement composites [1]; the ...

Kinsend needs to go through strict process review and production inspection for each photovoltaic support project, the following will take you to understand the main Solar mounting support design and production ...
