How do I design a solar hot water & photovoltaic system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future solar hot water and photovoltaic system components. Space requirements and layout for solar water heating and photovoltaic system components should be taken into account early in the design process.

How do I install a solar photovoltaic system?

Installing solar photovoltaic systems requires specialized skills and knowledge. Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements.

Who should design and install solar water heating systems?

The design and installation of solar water heating systems should only be undertaken by qualified individuals. Solar water heating systems involve components and operating principles not found in standard household plumbing installations.

Should you install a solar thermal system for heating hot water?

Installing a solar thermal system for heating hot water is a good move for the environment. But before you go ahead, it's essential to know all the facts so you can decide if a solar hot water system is the right choice. First, it's important to point out that there are two types of solar panel systems:

Do solar water heaters need a T&P valve?

All water heaters regardless of whether they are solar power or not, must have this safety device which is required by national building codes. There is no T&P valve required in the collector loop as it is a non-pressurized type.

Can I install a solar hot water cylinder on my boiler?

Here's a guide to what you can expect: Check the boiler is compatible with solar water heating - standard boilers usually are, but if there is a combi boiler, a solar hot water cylinder must be added to the system, so you'll need to consider if there is enough space and where to install it.
