

How does electricity work in Cyprus?

Electricity in Cyprus is managed by the Electricity Authority of Cyprus. Power is primarily generated at three fuel oil-burning stations but the use of distributed renewable energy is expanding. About 97% of the primary energy use was imported in 2008.

Why does Cyprus have a high electricity price?

Cyprus has one of the highest electricity prices in Europe, due to high reliance on liquid fuel for power generation. However, a major transition is imminent for electricity supply. On one hand, indigenous natural gas discoveries are to be developed in the coming years.

Can a long-term energy planning model be used in Cyprus?

In order to examine options for economically optimal deployment of renewable energy in Cyprus under different scenarios, and to understand the potential impact of key policy decisions on the power generation mix, a long-term energy planning model of the current power system in Cyprus was developed.

How will Cyprus achieve a higher share of renewables?

Cyprus has set out to attain a higher share of renewables, and this roadmap helps to assess optimal investment strategies in the power sector. Solar PV and wind power will play a major role in the roadmap to 2030. Roadmap findings will play an important role to revise existing energy policies and develop new ones.

Cyprus is positioning itself as a prominent player in the Eastern Mediterranean, with the potential to significantly reshape the region's energy landscape. The country made its first offshore gas discovery in 2011, and between 2018 and 2022, four additional discoveries were made by some of the world's largest energy companies.. Cyprus eyes energy independence ...

The power plant at the Vassiliko energy hub will have the capacity to produce 260 megawatts (MW) of electricity, Cyprus, which has an average capacity of 1100 MW. PEC said it had ordered 3 SGT-800 gas ...

The Renewable Energy Roadmap for the Re-public of Cyprus is based on three complementary sections. The

details of what is covered by each section and how each of them relates to the others are described below. 1) Cyprus energy balance and demand forecasts As a first step to analysing the potential for renewable energy deployment in Cyprus and

PME pakt door op zijn klimaatbeleid en zet verder in op de energietransitie. PME heeft in de afgelopen maanden alle beleggingen in de fossiele olie- en gaswinning en -distributie verkocht. Deze stap beïnvloedt het verwachte totale rendement van de beleggingen niet. De roep om aanpak van klimaatverandering is evident.
