The Marshall Islands consists of 29 atolls and 5 islands, the majority of which are not electrified, have an unreliable energy source, and pay very high fuel costs. In addition, income levels are low and communities are extremely remote, with small populations, long distances between each atoll, and unreliable transportation.

Researchers made the link to Rostelecom-Solar after identifying a comment in CosmicEnergy's code showing the sample uses a module associated with a project called "Solar Polygon," which is linked to a cyber range developed by the company. While this link exists, researchers said that it's also possible that a different actor reused the ...

Under the National Energy Policy and to address the challenges associated with fossil fuel dependence, the Marshall Islands implemented its outer island solar project, setting a target of 100% renewable energy electrification. The project resulted in 95% solar electrification of all outer island public facilities and households and, building on that success, the Marshall Islands has ...

Tele2 Russia has launched new base stations via the 2300MHz band to bolster its commercial 4G/LTE services in Moscow and St Petersburg. As reported by Telesputnik, the mobile provider had previously applied to regulator Roskomnadzor for permits to operate base stations in the 2.3GHz-2.4GHz band.

The deal was signed on 12th February and finalised this month. Rostelecom acquired a 45% stake in Tele2 Russia for RUB108 billion (US\$1.375 billion), with the remaining 10% obtained via a barter exchange for 10% of Rostelecom's ordinary shares, previously held by its subsidiary Mobitel. The shares have a transaction value of RUB24 billion.
