

Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

Are the Pitcairn Islands Green?

Pitcairn Islands, a group of five islands with a total area of 47 km² and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

How did the Pitcairn Islands make money?

The Pitcairn Islands issued their first stamp in 1940. These became very popular with stamp collectors, and their sale became the dominant source of revenue for the community. Profits went into a general fund which enabled the island to be mostly self-sufficient.

How to get to Pitcairn Islands?

Totegegie Airport in Mangareva can be reached by air from the French Polynesian capital Papeete. There is one 6.4-kilometre (4 mi) paved road leading up from Bounty Bay through Adamstown. The main modes of transport on Pitcairn Islands are by four-wheel drive quad bikes and on foot.

Do Pitcairn Islanders export fruit to New Zealand?

The Pitcairn Islanders, under the "Bounty Products" and "Delectable Bounty" brands, also export dried fruit including bananas, papayas, pineapples, and mangoes to New Zealand. Honey production and all honey-related products are a protected monopoly.

Where are the Pitcairn Islands located?

The Pitcairn Islands (/ˈpɪtkɑːrn /PIT-kairn; Pitkern: Pitkern Ailen), officially Pitcairn, Henderson, Ducie and Oeno Islands, are a group of four volcanic islands in the southern Pacific Ocean that form the sole British Overseas Territory in the Pacific Ocean.
