

Can solar cooling systems be controlled with absorption chillers?

Discussed various control strategies of solar cooling systems with absorption chillers. Solar cooling technology is a potential solution for air conditioning and thermal comfort in buildings. However, the intermittent nature of solar energy is a significant challenge for the widespread adoption of this technology.

Can solar energy be stored in a chiller?

While cold energy can be stored when excess solar energy leads to extra generation of cold energy from the chiller. The stored cold energy can be discharged to cover part of the cooling demand. Both cold and hot storage can be in the form of sensible or latent heat.

What percentage of solar Sorption cooling systems are absorption chillers?

According to a cost-benefit study of solar sorption cooling systems, absorption chillers account for roughly 82 % of the market share . This is due to their silent operation and flexible implementation .

Are solar energy systems the future of Hong Kong?

Solar energy systems, such as solar thermal and photovoltaics, are believed to be one of the potential areas for future development. Under the Hong Kong's urban context, technologies that can be integrated into a built environment with high-rise buildings are important.

Can adsorption chillers be used in Hong Kong?

Practical applications of adsorption chillers in Hong Kong are limited at the current stage mainly due to its large size, which is around two to three times larger than conventional VC chillers. The mechanical floors of commercial buildings often cannot fulfil the space requirement for adsorption chillers.

Is solar energy a good option for cooling & air-conditioning?

This is also associated with a vast amount of CO<sub>2</sub> emissions and other environmental concerns. Solar energy has been introduced as a crucial alternative for many applications, including cooling and air-conditioning, which has been proven to be a reliable and excellent energy source.

The Laboratory includes a solar simulator lab and a nano-coating development lab, which provides test facilities for testing and developing solar cells, nano coatings and solar energy devices of solar thermal and solar photovoltaic ...

Fong et al. presented using building integrated solar collectors and PV panels on an office building for solar cooling with Hong Kong climate [Fong et al, 2012]. Sun et al. presented the effects ...

The details of dynamic simulation of the two solar-thermal refrigeration systems, SAbRS and SAdRS, for typical office use can be found in the previous work of the authors [9] brief, their major system components

covered solar collectors, hot water pump, hot water storage tank, auxiliary heater, regenerative water pump, absorption/adsorption chiller, chilled water ...

However, for use in a sub-tropical region like Hong Kong, the different seasons throughout the year affect the performance of the DCS and ERU. In particular, when a solar cooling system is considered, the year-round variation of the solar intensity may not be the same as the ambient temperature.

Study on energy saving between air-cooled and water-cooled chiller water system in Hong Kong CHAPTER FOUR DATA ACQUISITION AND ANALYSIS 4.1 Introduction The core objective for this study was the determination of the means by which building owners in Hong Kong could integrate both air-cooled and water-cooled chillers in their conditioning systems.

YORK Chillers offer energy efficient solutions for any industrial or commercial cooling application. Learn more about our air-cooled and water-cooled HVAC chillers. View Our Brands HVAC Equipment. Security. Digital Solutions ... Hong Kong, China - English; Taiwan, China - ????

To study the feasibility of utilizing solar power for comfort cooling in Hong Kong, Yeung et al. [17] designed and constructed a solar-powered absorption air-conditioning system on the campus of the University of Hong Kong. The system consisted of a flat-plate collector array with a surface area of 38.2 m<sup>2</sup>, a 4.7 kW nominal cooling capacity ...

- Waste Heat Absorption Chillers & Heat Pumps can provide both cooling and heating solutions and are best suited where there is a steady source of waste heat, such as in industrial processes. There are 3 sub-types; Gene-link/Solar-link which use steam or natural gas and supplemental hot water from industrial and energy generation processes; Hot ...

In dense urban areas like Hong Kong, where buildings significantly contribute to electricity consumption and greenhouse gas emissions, the development of cost-effective Building-Integrated Photovoltaics (BIPV) is pivotal [27]. While early research predominantly focused on roof PV potential, recent studies have begun addressing the untapped potential of ...

University of Hong Kong, Hong Kong Abstract--To study the feasibility of utilizing solar power for comfort cooling in Hong Kong, a solar- powered absorption air-conditioning system was designed and successfully constructed on the campus of the University of Hong Kong (HKU). The system consisted of a fiat-plate collector array with a surface ...

Question 2 Solar-powered vapour absorption cooling can produce chilled water for air-conditioning of buildings in Hong Kong. As shown in Figure Q.2, the operating temperatures of a solar lithium bromide-water absorption chiller ...

cooling load met in the subtropical region of Hong Kong. It was noted that the performance of the solar hybrid

desiccant cooling system was better than the conventional air-conditioning system under the tested climate. In another study under the same climatic conditions, Fong et al. [14] proposed a solar hybrid cooling system for high-tech rooms.

In hot and humid Hong Kong, the demand for cooling is rising alongside global temperatures, but in the new Kai Tak Development a low-carbon district cooling system is keeping residents cool. The system uses seawater to supply 284 MW of centralised cooling to everything from schools and hotels to shopping centres and railway stations, achieving ...

The performance of solar cooling systems with building-integrated (BI) solar collectors was simulated and the results compared with those having the solar collectors installed conventionally on the roof based on the weather data in Hong Kong. Two types of solar collectors and the corresponding cooling systems, namely the flat-plate collectors ...

For the commercial premises with high latent load, as reflected from the high latent-to-heat ratio, the solar hybrid desiccant cooling system (SHDCS) had more superior cooling and energy performances than the conventional centralized air-conditioning (AC) system in the subtropical Hong Kong.

Solar cooling is a novel approach, which primarily makes use of solar energy, instead of electricity, to drive the air-conditioning systems. In this study, solar-assisted desiccant cooling system (SADCS) was designed to handle the cooling load of typical office in the subtropical Hong Kong, in which half of the building energy is consumed by the air ...

The research on energy performance of LDCS in Hong Kong, however, is quite limited. Fong et al. developed a detailed research on solar-assisted solid desiccant cooling system in Hong Kong [12], and found that the system could save energy in office buildings.

Hong Kong is implementing the FIT policy for the entire electricity generated by solar energy system, which is valid until December 31, 2033. In other words, electricity generated from a person's own solar photovoltaic system will be ...

In this study, solar-assisted desiccant cooling system (SADCS) was designed to handle the cooling load of typical office in the subtropical Hong Kong, in which half of the building energy is ...

For applications requiring prediction of annual performance and design of energy systems, there are two kinds of annual weather data in general use in Hong Kong, one is the typical meteorological year (TMY) developed by Chan et al. (2006) and another is the example weather year or test reference year (TRY) developed by Wong and Ngan (1993). Both of these ...

The solar desiccant cooling system (SDCS) had a saving potential of the year-round primary energy consumption as compared to the conventional air-conditioning system for full fresh air application in the

subtropical Hong Kong.

Study on energy saving between air-cooled and water-cooled chiller water system in Hong Kong CHAPTER FOUR DATA ACQUISITION AND ANALYSIS 4.1 Introduction The core objective for this study was the determination of the ...

PV Solar Chillers. The Chiltrix chillers are ideal for a solar PV powered installation whether grid-tied or off-grid. While the chiller needs AC power and therefore must connect to the solar energy source (or batteries) via an inverter, the Chiltrix unit is ...

Solar-assisted cooling systems are those that combine a traditional cooling system, like a vapor compression chiller, with an absorption chiller powered by solar energy to ...
