

What is a hybrid inverter?

Hybrid inverters are essentially two inverters in one; they combine a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home, charge a battery or send excess energy into the electricity grid. Most hybrid inverters can also provide emergency backup power during a blackout.

What are the best hybrid inverters?

Sungrow SH-RS series are our favourite hybrid inverters due to their numerous features, wide variety of sizes, high backup power rating, simple design and affordability. The SH-RS series is available from 3.0kW to 10kW and features 200% solar oversizing, a digital display, instantaneous backup power, and high efficiency.

What is a Deye hybrid inverter?

Deye hybrid inverters, produced by Ningbo Deye Inverter Technology Co., have become popular for backup and off-grid applications due to their high power rating, dual AC inputs, and built-in backup generator controls.

Are Sungrow batteries compatible with SH-Rs inverters?

Sungrow's SBR and new SBH high-voltage (HV) battery systems are the only battery compatible with the SH-RS inverters and are built using safe Lithium Ferro Phosphate (LFP) cells.

What is the difference between SH-Rs & 8 & 10 kW inverters?

The SH-RS inverters have a wide MPPT voltage operating range from 40V to 560V, while the more powerful 8 & 10kW units offer an impressive 4 MPPTs, enabling greater flexibility when designing solar arrays.

What happens if a hybrid inverter goes off the grid?

If the electricity grid becomes unstable or there is a blackout, most hybrid inverters will automatically disconnect from the electricity grid, known as islanding, and provide instantaneous backup (UPS) power. The changeover time from grid-tie to backup or off-grid mode is typically less than 30 ms (0.03 seconds), depending on the inverter.
