

Thailand bess supply

How many Bess projects were approved in Thailand in 2022?

In 2022, the Thai government approved 24 BESS projects, all of which were located alongside solar operations. Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees.

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

What is Bess project?

The cumulative cooperation has achieved the GW scale. Among all the previous ones, this BESS project is a milestone, which can help improve the Thai power structure, quicken the establishment of an intelligent power grid and possibly guide the future power generation and storage of new energy in the whole Southeast region.

Why do some solar projects in Thailand have non-firm PPAs?

Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site. Arrangements, including BESS, reduce the strain on power grid infrastructure and allow for better planning. On the downside, these do not improve grid stability, nor do they provide power generators with more pathways to increase revenue.

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.

Additionally, Thai representatives in the IPEF Supply Chain Council and the IPEF Supply Chain Crisis Response Network should take a proactive approach by compiling a database of parts manufacturers and monitoring developments related to goods that may be impacted by Thailand's key production status in IPEF, preparing preventative measures and ...

Thailand has a low BESS market attractiveness, ranking fourth on the BMAI score. Through a pilot project, The Electricity Generating Authority of Thailand--a state-owned electricity generation authority in Thailand--operated a BESS in the Mae Hong Son, Chaiyaphum, and Lopburi regions, which have a high share of renewable energy [42].
