My concern about the Lynx Class-T Power-In is that the fuse ends up at the wrong end of the cable. I want that Class T fuse at the battery end of the cable. Reactions: featherlite. N. Ned Zissou New Member. Joined Sep 22, 2022 Messages 1. Nov 23, 2024 #17

4.1.3. System Example - Lynx Power In only. In this system a Lynx Power In is used by itself. Multiple Lynx Power In modules can be connected to each other thus creating a longer busbar with more connections for batteries and/or loads. The Lynx Power In does not contain fuses. All connected loads, chargers or batteries need to be fused ...

I had the very same question, however, I am dealing with 8-100Ah batteries and 2-Lynx Power-In modified to use 100A mega fuses on each battery. I thought about wiring . Battery1 + and Battery8, 2+/7-, to the same input position; All batteries wired normally and put Shunt/negative cable on opposite end of Lynx

The Lynx can't power up without it because the supply for U6 is routed through the inserted cartridge, but if you power the PCB with your own 5V supply, then the board is powered independently of the latching circuit and regulator, and ...
