Tunisia maxwell energy systems

Is OSeMOSYS a long-term model for electricity production in Tunisia?

This paper presents a long-term model of Tunisia electricity system, based on OSeMOSYS (Open Source energy MOdelling SYStem), aimed at unveiling potential benefits of increasing RES in electricity production.

Why does Tunisia need more electricity?

As one of the most climate vulnerable Mediterranean countries, Tunisia's electrical system is expecting increased demand resulting from expanding peak-hour demand patterns, intensifying cooling needs stemming from greater warm spells, and increasing desalination needs.

What is the energy system in Tunisia?

In BAU, the Tunisian energy system is based on the continuation of already legislated policies, current trends, existing plans and cost improvements in low-carbon technologies, without considering additional climate targets, with fossil fuels remaining the prime forms of energy until 2050 (Table 1). Table 1.

Who is Maxwell energy systems?

Maxwell Energy Systems - Developer of battery management systems for electric vehicles. Acquired by Endurance Technologies. Founded by Alexandre Jacques Collet, Akhil Aryan and 2 others in the year 2016. Maxwell Energy Systems has 167 competitors.

What limiting Tunisia's energy transition?

At the system level, a number of other elements currently limit Tunisia's progress in the ener-gy transition: subsidised electricity prices that contribute to the national fiscal deficit, energy market structures, hesitant support from institutional actors, and human resources bar-riers.

What percentage of Tunisia's electricity is generated from natural gas?

In 2020,natural gas made up 86% of Tunisia's installed capacity and 95% of power generation, while renewable energy made up 13% of installed capacity and 5% of power generation. Fossil fuels represent the majority of Tunisia's electricity generation mix (approximately 97%), with natural gas being the primary fuel source.
