#### How do you calculate solar cost per watt?

Calculating solar price per watt is pretty simple. Simply divide the cost of the system (in dollars) by the size of the system (in watts). PPW = System cost /System wattageNow,solar systems are typically sized in kilowatts (kW),so you'll have to multiply by 1,000 to convert to watts.

#### How much does a solar panel cost?

Yes, it's possible to buy a single solar panel for as little as \$100, but a solar panel does not operate in isolation. You need a system of hardware and software to generate electricity from the sun, including solar panels, an inverter, mounting hardware, wires and cables.

### Which solar system has the best price per watt?

At first glance, Quote 1 seems like the best deal because it has the lowest sticker price. However, when you calculate the PPW for each quote, you find that Quote 3 provides the most bang for your buck at \$3.25 per Watt. In general, larger solar systems have a lower price per watt.

Why does a solar system cost a lower price per watt?

In general, larger solar systems have a lower price per watt. That's because soft costs (permitting, installation, inspection, customer acquisition, and overhead) are roughly the same from project to project and don't add capacity to the system. Here are some other factors that influence the price per watt of a solar system.

### Does SunPower equinox have a microinverter?

It's also important to know a SunPower Equinox ® solar solution has unique,factory-integrated microinverters each panel. Meaning, if one panel isn't producing energy because of shade, neighboring panels receiving more sunlight can still generate solar energy for your home. What are the most efficient solar panels?
