How much money is available to install solar & battery storage systems?

SAN JUAN, Puerto Rico -- The U.S. Department of Energy said Thursday that \$365 million is available to install solar and battery storage systems in homes and healthcare centers across Puerto Rico.

Why should you choose An islanded Solar System?

On the one hand, it will enable you to continue to power your home with locally-produced solar generation even in the event of a grid outage. On the other hand, an islanded system has no risk of pushing excess electricity onto the grid, making it safe for utility workers to work to restore regular service.

Can You Turn your home into an energy island?

However, much like islands are forced to be self-sufficient if you install a battery with islanding capabilities, you can turn your home into an "energy island." As a result, islanding allows you to keep your home powered regardless of what's occurring on the rest of the grid, including during weather-related outages.

Do solar inverters work if there is a power outage?

In other words, solar inverters are explicitly designed not to allow your solar panels to continue to push electricity into your home in the event of an outage. This occurs primarily for the safety of utility line workers tasked with responding to an outage and getting the electrical system back up and running smoothly.

Are solar panels dangerous?

When solar panels produce electricity, they send electricity into your home and excess electricity to the grid. This creates a dangerous situation for line workers who work with transmission and distribution lines during an outage.
