

What to add after solar power generation

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system.

Why add solar panels to an existing solar system?

How do I get more solar panels on my roof?

Working with your original solar installer is the best way to get more panels on your roof. Your initial installer will be comfortable with your system, know which permits you must apply for when adding panels, and what equipment will pair best with your existing system.

Should you install a battery alongside solar panels?

Installing a battery alongside solar panels means you can store excess electricity generated by your solar panels to use at a time that suits you. Two-fifths of solar owners in our survey also had a battery that stores electricity for later use. Find out more about solar panel battery storage.

Will adding more solar panels save you money?

Adding more panels will save you more money, but if the amount you have to spend is worth what you get in added savings is ultimately up to you. Additional solar panels can pay themselves back in around 10 to 11 years but ultimately depend on your area's electricity rates and solar panel production.

Will solar panels generate enough electricity year-round?

Whether they'll generate enough electricity for your home year-round will depend on: if your solar panel system works in a power cut. It may be more realistic to think about whether you can be self-sufficient for the brighter parts of the year, and then top up your energy use from the grid at other times.

How does a solar PV system work?

Solar PV panels - convert sunlight into electricity. Inverter - this might be fitted in the loft and converts the electricity from the panels into the form of electricity which is used in the home. Generation meter - records the amount of electricity generated by the solar PV system.

Therefore, the present work is an attempt to ascertain the potential reduction of solar power generation between a commercial and a background site in the urban region of ...
