

# Why do new houses come with solar powered lights

Should new build homes have solar panels?

If new build homes had solar panels and the ability to store energy in batteries, the country would certainly benefit from a reduction in emissions of carbon dioxide. The more energy we harness from the sun, the less we need to get from other means i.e. fossil fuels. When a home already has solar panels it has an excellent selling point.

Should you buy a home with solar panels?

When a home already has solar panels it has an excellent selling point. When you move into a property with solar panels, you really begin to notice the benefits. Solar panels mean that a household can enjoy certain parts of the year being completely self-powered, meaning there should be a significant reduction in their energy bills.

Could solar panels be upscaled for new homes?

Some housing associations have already started fitting solar panels to new and existing homes after securing grants from the Welsh government - and they could provide a template for how to install panels to new homes cost-effectively that could be upscaled for major housing developments.

Are solar panels a legal requirement for new homes?

Even though installing solar panels on new builds is a great way to set new homes up with renewable energy from day one, it's not yet a legal requirement. One common problem is that developers don't use all the available roof space, resulting in a less effective solar panel system.

Is it cheaper to install solar panels on a new home?

It is vastly cheaper to install solar panels on a new property than it is to fit them retrospectively after a family moves in. Having mandatory requirements for solar panels on new homes means that installation costs are lower and homeowners can save money as soon as they move in. Can a home run entirely on solar power?

Do solar panels generate electricity?

That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use. Even in winter, solar panel technology is still effective; at one point in February 2022, solar was providing more than 20% of the UK's electricity.<sup>1</sup>
