

Wind power canvas blades

Who makes Canvus wind turbine blades?

Big wind turbine manufacturers such as Vestas, GE, and Avangrid have sent thousands of blades to Canvus's factory since its founding in April 2022. Canvus, in turn, collaborates with nonprofits and civic organizations to provide towns and cities across the US with park benches, tables, and planters made from those wind turbine blades.

How much a wind turbine blade does a Canvus bench reuse?

Altogether, the dozen benches reuse roughly a quarter of a single 150-foot (45-meter) wind turbine blade. "We give this material a second life," says Parker Kowalski, co-founder and managing director at Canvus.

Can wind turbine blades be used as public art?

The US Department of Energy estimates that the average rate of wind turbine retirements will include up to 9,000 blades per year by 2026, and that number will only grow. So Rocky River, Ohio-based startup Canvus is keeping end-of-life wind turbine blades out of landfills by turning them into functional public art.

Why should you choose Canvus for your wind turbine blades?

However, this is more than decorative art - its art designed for people to sit on, gather around, and experience in the spaces they love. Canvus is the lowest cost qualified vendor for 100% of your retired wind turbine blades, acting as a distributor for all of the byproduct.

Can old wind turbine blades be recycled?

A company called Canvus pioneers sustainability, turning old wind turbine blades into functional spaces and community art. In a strategic intersection of manufacturing, wind energy, and sustainability, Canvus, an Ohio startup, has taken a step forward in tackling the ongoing issue of recycling retired wind turbine blades.

Does Canvus use recycled turbine blades?

Canvus's commitment to sustainability goes beyond the use of retired turbine blades. The company incorporates other recycled materials, such as rubber tires, shoes, and plastic waste, in its products. However, a comprehensive life-cycle assessment of its products, including energy usage for blade transportation and processing, is still in progress.
